Nguyen Vu Truong Phuc

Software Developer — Backend · Data Engineering · Automation

Ho Chi Minh City, Vietnam · pn849222@gmail.com · github.com/pn849222-hub

SUMMARY

Co-founder of VANG LAI, a community sports platform on .NET 10, PostgreSQL and Redis, where I review and merge the code and did the security and correctness hardening pass. Outside it I build my own tools end to end: Python data pipelines, .NET APIs, containerised deployment. Comfortable reading unfamiliar codebases, writing tests, and reasoning about *why* code is wrong rather than only that it is. Educated in English for twelve years; fluent written and spoken.

EXPERIENCE

Co-founder — VANG LAI *— Jun 2026 – Present · Ho Chi Minh City*

A community sports platform: .NET 10 / ASP.NET Core on PostgreSQL and Redis, Blazor Server web and admin surfaces, an Expo / React Native mobile app, and Docker Compose / Traefik deployment. I review and merge the code that goes into the main branch, and ran the security and correctness hardening pass across the stack:

- Moved the admin token out of `sessionStorage` into an **HttpOnly cookie**, closing an XSS exposure; added auth guards and an error route to the Blazor admin
- Removed a broken access-token gate that was bouncing already-signed-in users, and fixed admin login and runtime failures behind regression guards
- Made health checks surface the underlying provider error instead of a generic failure, and serialised booking approval to remove a race
- Brought status colours up to **WCAG AA** contrast; pinned the exact TypeScript version; fixed the Expo API-base and build configuration
- Deleted two dead legacy codebases and added the Development configuration so the API runs without the launcher

Independent Software Developer *— 2026 – Present · Remote*

World Board — multi-workspace workflow engine · *Python · sole author*

A command-driven engine that runs each task in its own process and writes an execution report per run. Pytest suite on temporary databases so live data is never touched; SQLite with migrations; driven entirely from the shell, so any agent with shell access can operate it.

OPEN-SOURCE WORK *— sole author · github.com/pn849222-hub*

vn-it-job-market · *Python, SQLite, pandas*

A pipeline over 672 live job postings from 320 companies. It collects schema.org JSON-LD through the site's published sitemap after checking `robots.txt`, rate-limited and resumable after interruption, then cleans the result into SQLite and runs the SQL aggregations behind the charts. The substance is the data-quality work: every posting declared its currency as USD, including ones whose text read "14 – 16 million VND/month", so currency is detected from the text instead; non-skill tags such as "Fresher Accepted" are excluded from skill counts; and an early version keyed on each posting's trailing number, which turned out not to be unique and silently dropped about fifty jobs — found and fixed by keying on the full URL slug.

job-market-api · *.NET 10, Dapper, Docker, xUnit*

A read-only REST API over that dataset. ASP.NET Core Minimal APIs, Dapper, SQLite opened read-only, Swagger/OpenAPI, and a multi-stage Docker image running as a non-root user with the application itself as the container health check. 11 xUnit tests, each against its own throwaway database. Separate liveness and readiness endpoints; `group_concat` in a correlated subquery returns each job's skills without a query per row.

TECHNICAL SKILLS

Languages	C#, Python, SQL, JavaScript / TypeScript, HTML / CSS
Backend	ASP.NET Core, Minimal APIs, EF Core, Dapper, REST API design
Data	PostgreSQL, SQLite, Redis, pandas, matplotlib, schema design
Frontend	Blazor Server, React Native / Expo
Infrastructure	Docker, Docker Compose, Traefik, nginx, MinIO
Testing	xUnit, pytest, end-to-end testing
Tools	Git, Linux, Bash, Power BI

EDUCATION & LANGUAGES

BSc Computer Science — second year, in progress. Twelve years of schooling in English at an international school. **Vietnamese** native · **English** fluent.
